Test case design techniques

Theme description

Write test case name and test case summaries for the requirements defined in the Requirements chapter. Group the test cases for each requirement.

Apply the correct test case design techniques while also using the positive/negative classification learned in Course 3.

Test cases will be raised using the Zephyr tool presented in Course 4.

What you'll learn

- ❖ Understand the approach used to apply test case design techniques
- ❖ Understand the test case granularity required to cover requirements
- ❖ Mix different test case design techniques to ensure optimal coverage

Requirements

- ❖ High school and college must be completed in the Education field
- ❖ Only people with medium or high English knowledge can create account
- ❖ Only people older than 7 years old can create accounts
- ❖ The minimum password length must be 8 characters
- ❖ You can advance to the registration form only after you tick both checkboxes from the Terms and Conditions page
